Elap Multi-Drive Push Pull Hand Controls

The Elap Multi-Drive Push Pull Hand Controls have been developed to offer a simple and cost effective solution to allow the acceleration and braking actions to be applied via your hands rather than legs.

Its simple operation is easy to understand and most do not struggle to adapt their driving style.

The operation of the brake and accelerator is fully mechanical so if you are driving long distances or have less upper body strength we would recommend one of our large range of electronic hand controls such as the electronic trigger accelerator and brake system.

The Multi-Drive Push Pull can be supplied with an indicator switch for both non-multiplex and multiplex vehicles as an extra low cost option. If you are unsure if your vehicle is multiplex or not, please call our customer solutions team who will advise you accordingly.
