Simple push to accelerate ● Injection moulded plastic covers ● Accelerator is automatically cancelled when braking ● Leather covered ring no-cost option ● Acceleration without removing hands from wheel ● Fully Electronic (interface) or electro-mechanical system

906GV (electronic) Ring Accelerator

The electronic ring accelerator is one of the most advanced driving adaptations available. It provides a light and non-tiring acceleration control with a positive and comfortable response. The system is designed not only to operate effortlessly but also to 'blend in' with the vehicles interior producing that original equipment 'feel' The accelerator ring can be fitted to most vehicles and is available in two versions: one that controls via an electro-mechanical system and the other completely electronic 'interfacing' seamlessly with the vehicles original 'fly-by-wire' system.
