Simple push to brake ● Injection moulded plastic covers ● Brake 'lock' for temporary hand brake ● Highest quality components compliment vehicle trim ● 2 Buttons available ● Leather covered lever ● Can be fitted to most vehicles ● Optional trigger accelerator

**907C (mechanical)
Brake Lever**

The 907C brake lever compliments all the accelerator systems and is the result of over 30 years of continued development. The system utilises both an injection molded plastic cover and a leather covered lever ensuring that quality feel. In operation the lever is simply pushed away from the body to promote braking. A useful feature is the 'brake lock' which allows the lever to be locked in a brake on position for instance whilst waiting at traffic lights. Release of the lock is automatic when the lever is pushed. The vehicle can be driven conventionally with little obstruction to the able bodied driver.
