Ergonomically designed 'Trigger' Accelerator ● Can be operated by either finger or thumb
 ● Brake 'lock' for temporary hand brake ● Injection Moulded plastic covers ● Leather covered lever ● Optional vertical 'pull' lever for control from steering wheel similar to a 'push-pull'

907elec (electronic) Trigger Accelerator

The 907C brake lever with integral accelerator provides both an easy to use and comfortable accelerator system. The system features both an injection molded plastic cover and a leather covered lever ensuring that quality feel. In operation the lever is simply pushed away from the body to promote braking and the finger/thumb 'trigger' rotated to promote acceleration. A useful feature is the 'brake lock' which allows the lever to be locked in a 'brake on' position for instance whilst waiting at traffic lights. Release of the lock is automatic when the lever is pushed. As a safety feature the accelerator is automatically cut whenever the brake is applied. The vehicle can be driven conventionally with little obstruction to the able bodied driver.
