Simple pull to accelerate under-ring operation ● Comfortable and responsive ● Can be fitted to many vehicles ● Highest quality components compliment vehicle trim ● Fully electronic (interface) or electromechanical system ● Vehicle can be driven conventionally

916GV (electronic) Under ring Accelerator

The electronic ring accelerator is one of the most advanced driving adaptations available providing a light and non tiring acceleration control with a positive and comfortable feel. Designed not only to operate effortlessly but also to 'blend-in' with the vehicles interior. The acceleration ring once installed on the steering wheel affords that original equipment 'feel'. The accelerator ring can be fitted to many vehicles and is available in two versions: one that controls an electro-mechanical system and the other completely electronic 'interfacing' seamlessly with the vehicles original 'fly-by-wire' system.
