*Unique 'radial' action accelerator ● Combined 'push' brake ● Accelerator is automatically cancelled when braking ● Electronic or manual systems ● Can be fitted to most vehicles ● Vehicle can be driven conventionally when required*

## Radial Accelerator

The Radial accelerator has many unique features which make it a pleasure to use. The radial accelerator is suitable to be fitted to most vehicles and is offered in either electronic or fully mechanical versions. Since the unit is mounted neatly under the steering wheel all functions such as airbag and secondary controls mounted on the steering wheel are retained for use. The vehicle can be driven conventionally when required, regardless of whether the electronic or electro-mechanical system is fitted.
