Quick release
Left Foot
Accelerator
QR/LF1

The ELAP Quick release pedal guard is essential to prevent inadvertent activation of the accelerator, brake and/or clutch pedals after the fitment of hand controls. Also the pedal guard prevents injury caused by a foot being trapped beneath the pedal when operating a push brake or after having a semi automatic clutch fitted. Designed to be quick release the QR1 can be removed in literally two seconds to allow conventional and totally unobstructed driving. An extremely high powered magnet is used, employing the rare earth element 'neodymium', which facilitates the quick insertion/removal yet maintains a solid and rattle free adaptation.
